

PERIMETER INTRUSION DETECTION SOLUTIONS

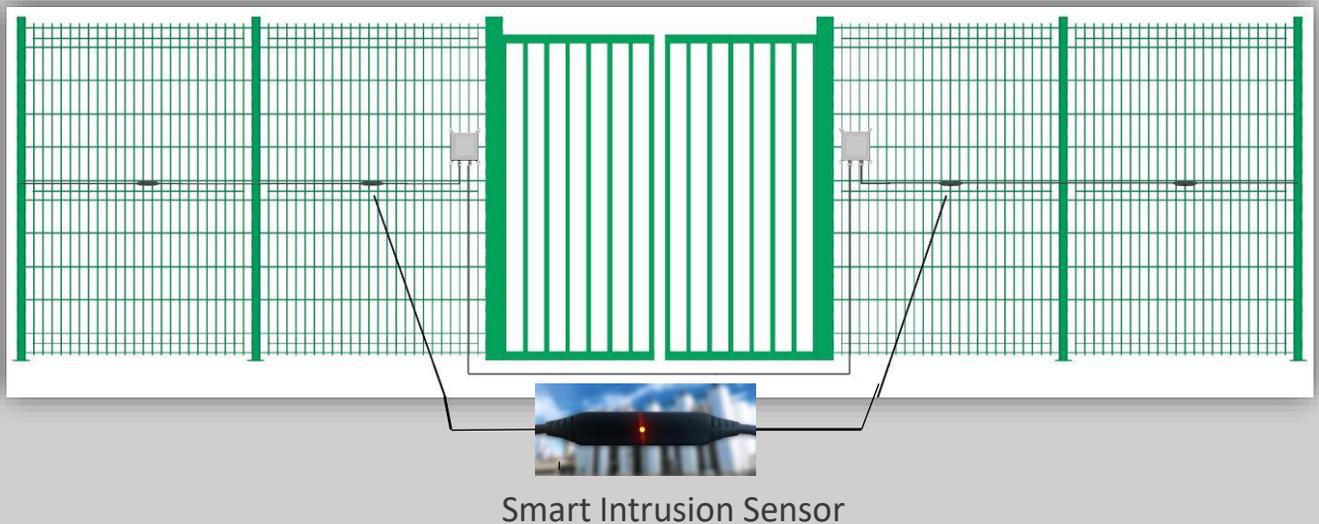

www.conurets.com

AssetGuard is a fence-mounted intrusion detection system for perimeter fences. The fence detection cable uses sensors to detect fence vibrations generated by intrusion attempts made by cutting, climbing or lifting the fence. Built on innovative stereo doppler technology motion sensors, **AssetGuard** solutions offers advance warning of threats and breaches on the perimeter, before an event occurs with the peace of mind of False-Alarm-Free reliability.

AssetGuard is a stand-alone solution, with minimal civil engineering and virtually infrastructure-free. Zoning feature gives precise location of cuts, climbs, lifts of fence for verification. Detection zones can be set up and modified easily. Solution offers Distributed Intelligence – each sensor has its own signal processing and allows to filter environmental and false alarms.

AssetGuard control unit is solar-powered and has very good performance even in low luminosity offering peace of mind of outage worries.

TARGET CUSTOMERS

- Airports
- Utilities/Smart Grids
- Defense Facilities
- City Facilities
- Corrections

FEATURES

- Solar Powered
- Set Up Detection Zones
- Signal Processing @ Sensor
- Precise Location of Breach
- Integrate with existing systems
- Distributed Intelligence

BENEFITS

- Prevent Thefts
- No Human Dependency
- Fast Deployment
- False-Alarm-Free Reliability
- Mobile Alerts
